PAINT EQUIPMENT CLEANER

PAINTING EQUIPMENT CLEAN-UP SOLVENT

Purasolve Paint Equipment Cleaner is a unique cleaning compound, designed to replace MEK, Toluene blends, and lacquer washes.

The product is a low volatile surface preparation solvent that is excellent for resin and paint application clean-up. The product can be easily recycled (up to 100 times), through a low cost, ambient temperature filtration system.

Benefits

- Improved user safety – non-dangerous and non-explosive
- More pleasant working environments – no offensive odours
- Eliminates handling and use risks associated with hazardous solvents
- Reduces hazardous waste disposal costs
- Cost-effective – product can be recycled and re-used for up to 18 months
- Extends equipment life – no drying out caused by evaporation
- Reduced Carbon Footprint – low VOC (Volatile Organic Compound) emissions and less hazardous waste for disposal

Purasolve Paint Equipment Cleaner has a low vapour pressure and is slow evaporating. This allows the product to thoroughly clean and remove all paint residue from paint equipment, instead of evaporating quickly and leaving behind deposits that cause congestion, impair painting applications, and damage equipment.

The product is designed for ease of paint clean-up and allows thorough cleaning, without having to disassemble the equipment. This helps reduce labour costs and down-time usually associated with paint clean-up.

It is recommended that the product be used in conjunction with **Purasolve**'s unique closed-loop reclamation system that allows the product to be recycled and reused during the paint cleaning process.

Filtered solvent is returned back into the system for re-use and paint related waste is captured by the filtration system and collected ready for waste removal.

Benefits include cost savings from a reduction in the volume of cleaning solvent purchased, lower disposal costs, and no special storage requirements.

Purasolve Paint Equipment Cleaner is free of harmful and unhealthy chemicals, and you are not exposing users to health and safety risks and future litigation claims.

The product has a low toxicity to our eco-systems, along with low VOC emissions. It is an environmentally responsible safety solvent that helps protect the ozone layer.
