METALLIC TOUCH

ORGANIC NON-CORROSIVE VEHICLE & EQUIPMENT CLEANER

Triple7 Metallic Touch is a high-performance and non-corrosive bio-based vehicle & equipment wash.

Traditional cleaning products contain harsh and/or toxic ingredients - great for cleaning purposes but they have the potential to cause long-term damage to surfaces, including faded paintwork, pitting, corrosion and etching. Vehicle cleaners often have a high salt content. This can cause problems in water re-use systems and result in high disposal costs and issues with effluent discharge.

How It Works

Triple7 Metallic Touch is a surfactant based, release agent. The unique action of the product “lifts & releases” contaminants from paintwork including salt, soil, polymers, bird droppings, grease and insects.

What Makes It Different

Triple7 Metallic Touch is free of toxic and hazardous ingredients including caustics, petroleum derivatives, phosphates, strong acids, lauryl sulphates, terpenes, glycol ethers, methylated spirits, ammonium compounds and oxalic acid.

Storage and Handling

The product has a long shelf life of approximately 10 years when stored and used under normal conditions of use. It has no special handling and storage requirements.

Effective Cleaning

Triple7 Metallic Touch removes the toughest deposits, it has good foaming and its performance is not affected by water hardness. The product is non-corrosive and free of harsh chemicals. This helps preserve all metal finishes and gives a cleaner surface that maintains its appearance for longer. **Triple7 Metallic Touch** leaves surfaces clean and shiny without using waxes or synthetic shining agents.

Protects Paintwork, Trims, Plexiglass, Rubbers & Plastics

The product may be left to dry on paintwork or metal surfaces and can be used un-diluted, without fear of decreasing gloss or shine. **Triple7 Metallic Touch** may be used on all surfaces including duco, glass, chrome, stainless steel, plexi-glass, rubbers, plastics, vinyl & canvas.

Improves Quality of Washdown & Oil/Water Separation

Triple7 Metallic Touch is plant-based and free of inorganic salts that contribute to high salt loadings in run-off water. The product is a natural oil/water separator and wash-down helps keep drains clean and odour-free, along with enhanced oil/water separation and system performance.

Save on Costs

Triple7 Metallic Touch is a highly concentrated product that is used at a low dilution rate. It keeps vehicle & equipment cleaner for a longer period, thus reducing the frequency of vehicle washing. The product is easy to apply which also helps to reduce labour costs.

Triple7 Metallic Touch does not contain toxic or hazardous components and the product can be flushed with water through sewage systems, reducing disposal and trade waste costs. However, wash-down effluent may contain high levels of contaminants and the manufacturer advises liaison with government authorities before releasing to sewage or storm water.

Environmental Impact

The product is bio-based and manufactured from renewable resources. It is readily biodegradable and has no detrimental effect on ecosystems or the ozone layer.

Application

Work in the shade or ensure the cleaning surface is cool. Pre-treat insects, wheels, tyres, brake dust, tar, grease & badly contaminated areas. Mix 40ml of product in a 2 litre bucket and spray apply. Allow to stand 15 minutes for the pre-wash to penetrate, scrubbing if necessary. Repeat if required.

For all-over washing, mix a solution of **Triple7 Metallic Touch** with water, using the guidelines for dilution rates. Use a mop, sponge or soft broom, apply the product, washing from bottom up to the top. This will prevent streaking. Allow to stand for 10 minutes and follow by a light water rinse, spraying from the top of the vehicle downwards.

Dilution Rates

Vehicle Washing

Dilute product 1:10. Apply with a soft brush to remove road grime, insects and soot. Rinse clean without using excessive amounts of water. Any un-rinsed residual will improve paintwork and resist soiling.

Wheels, insects, tar, engines

Product can be used neat, or diluted between 1:2 and 1:5. Spray on, leave for 10 minutes and scrub as required. Rinse or pressure wash as necessary.

Windscreen washers

Add 10ml-30ml to washer bottle.

Interior (carpets, leather seats, plastics)

Dilute product 1:20. Spray on, lightly scrub with a soft brush and wipe-over as needed. Towel dry to remove moisture and dirt. Will also remove most offensive odours from interiors.

Testimonials

“We have been using your **Triple7 Metallic Touch** for ten months now, and have found it to perform equally as well as any of the degreasers we have used in the past. We are very pleased to inform the EPA and other bodies that we are using your organic cleaner as the cleaners we have used in the past require addition of hydrocarbons to make them work properly. Yours does the job without any of these additives.”

VACC Commercial Vehicle Specialist, Victoria

“Our Korean car has been regularly washed using **Triple7 Metallic Touch**, and I’d like to tell you about it.

The car is now 5 years old and though I don’t polish it, it looks like it has been. The paint has good metallic glow, is smooth and it looks much better than some more expensive vehicles. I wash it using a soft broom and small brush, and rinse lightly as I understand I don’t have to worry about residuals causing paint etch, etc.

Our car is not treated with any special care, other than to wash it with **Triple7 Metallic Touch**. We live in a coastal town on a dirt road, have no garage or carport and the car has over 180,000 kms on the clock. But you would never guess if you ran your hand over the paint work. I tend to be a car buff, and I’m impressed.”

Country Car Owner, Victoria

Customer Feedback

CAR 1. Three year old, metallic silver. Regularly washed at an automatic car wash.

Triple7 Metallic Touch was used to clean the vehicle over a period of weeks, using 80ml-150ml of product in 7 litres of water each time. The clear coat showed noticeable improvement in gloss level within a few washes, restoring most of the dullness caused by the auto wash.

CAR 2. Two year old, black metallic.

Triple7 Metallic Touch was used to clean the car, using 500ml in 6 litres of water. It was washed using a hand mitt, rinsed and wiped over. An immediate improvement in appearance was noticed by the owner.

CAR 3. Fifteen year old, red non-metallic.

The entire paint surface on this car looked aged and shabby. Sections on a door panel and the bonnet were washed 8 times with a 10% dilution of **Triple7 Metallic Touch**. The door area was improved, restoring shine and smoothness. There was a small improvement to the bonnet (being too oxidised to be restored as effectively as the door section).

In each case, there were visible improvements in gloss level and appearance. **Triple7 Metallic Touch** improved the overall smoothness of the vehicle surface, restoring mild oxidation and removing grit and road grime.
